DETAILED ACTION

Allowable Subject Matter

Upon further consideration, the rejection of claims 1-7, 11, 12, 20, and 21 under 35 U.S.C. 102 (b) as being anticipated by Mathies et al. (WO 00/42424) has been withdrawn. Thus, the corresponding claim rejections under U.S.C. 103 (a) based upon Mathies et al. (WO 00/42424) have been withdrawn.

In addition, the rejection of claims 1-21 on the ground of nonstatutory obviousness-type double patenting as being unpatentable over Claims 26, 29, and 30 of Mathies et al. (U.S. 6,361,671) has been withdrawn.

A search of the prior art revealed no reference teaching or fairly suggesting the detection of a signal from a redox-active label, or any nucleic acid label, at a phase angle **out of phase** with respect to the optimum phase for the label, thereby detecting a **drop-out** of signal at the phase angle indicating the presence of the label.

Mathies et al. (WO 00/42424) teaches "phase locking" of electrochemical signals to *increase* signal to noise ratio (page 14, lines 1-7, for example), as opposed detecting a **drop-out** of signal at the phase angle.

Conclusion

Claims 1-21 are allowed.
